About - Wireframe

My Story

Hi, I'm Joe. I studied a Bachelor of Business Management at the University of Queensland from 2016 to 2019. After graduation, I got a job as a Social Media Coordinator at Entain, working in this position for just under three years. During this period, in my free time, I finally decided to learn how to code, which was an interest that I had had for quite some time. I looked into the various programming languages and the different areas of programming, and I eventually landed on Javascript & web development. First, I began learning HTML, CSS to provide a solid foundation, and then moved onto frontend vanilla JavaScript. Later on, I learned how to create a backend application using NodeJS & the Express framework. Entain recently offered an internal scholarship to be put into Coder Academy's Accelerated Web Development program, and I jumped at the opportunity. Now here I am as a web developer in training. If interested, you can find my resume linked below.

Problem Solving

Creativity

Adaptability

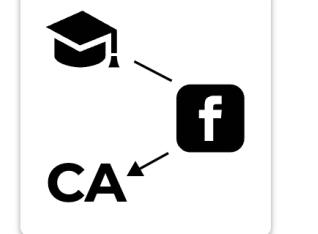

Interests & Personality

Programming has been an interest of mine for a little while now, but this website probably gave that away already. Other than that, I spend a lot of my free time at the gym and keeping up with my favourite sporting leagues, such as the NFL, NBA, MLB and Formula 1. My introverted side also loves to stay indoors and binge TV shows.

Projects

Calculator

To test out my HTML, CSS & frontend Javascript skills, I created a calculator application. This app allows users to press the usual buttons found on a calculator, and performs a variety of operations based on the input, including updating the screen and calculating values.

[VIEW ON GITHUB](#)

RESTFUL Backend API

{ JSON }

After learning the Express framework, I used this to create a RESTFUL backend API for a Facebook clone website. This API implemented authentication, caching with REDIS, connected with a MongoDB database and provided support for the various CRUD operations. The backend API was designed to communicate with various frontend applications via HTTP request and responses using JSON.

[VIEW ON GITHUB](#)

Portfolio Website

After learning how to build a static website using HTML & CSS, I took advantage of these newfound skills to build my own portfolio website.

Component List - Small Viewport

The screenshot shows a mobile-optimized 'About' page. At the top, the word 'About' is centered above a red horizontal line. Below this, there's a white rectangular box containing three icons: a graduation cap, a Facebook 'f' logo, and the letters 'CA'. Arrows point from each icon to its respective letter. Below the box, a paragraph of text describes the author's journey from a business management graduate to a software developer. At the bottom of the section is a red button with the text 'LEARN MORE'.
